ICL Collaboration Cloud

iCIM, iPIM

Bring your ICL Project to Life through Data Visualisation

Many people have connections to the built environment. From designers, developers, clients, and the wider construction team to citizens, office workers, city planners, and community leaders.

Data visualisation is often underestimated. It is not just interesting images for reports and presentations. It provides insights through analysis and is critical to helping people understand complex information.

The ICL Collaboration Cloud connects all ICL tools to bring your projects to life through data visualisation.

You can now link all aspects of all stages of every building: from design and construction, to owners and occupants, to planners and community leaders, in a single collaborative environment. You can work across any Portfolio or Community, at any scale; Citizen, Company, Campus, City, or Country.

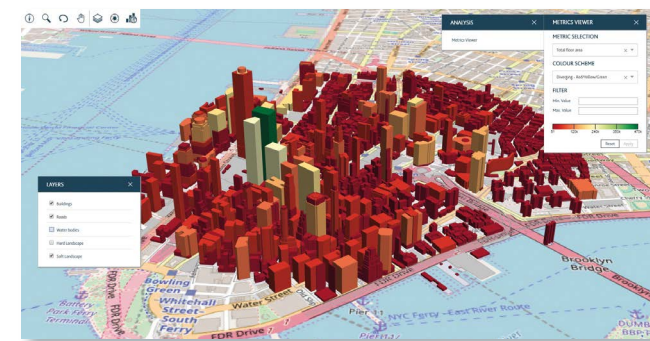

Connect all ICL tools across a community or portfolio

- Engage & Communicate
- Insights and analysis
- Share data and collaborate
- Bespoke dashboards
- Interactive 3D models
- Different views and levels of access
- Automatic alerts

One Central Cloud-based Ecosystem

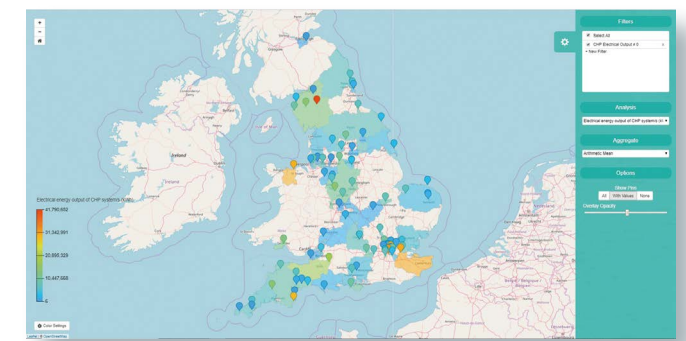

iCIM

iCIM is a community resource monitoring and management platform that improves sustainability performance.

- Host any urban data that knows when and where it's from
- Integrate live-data
- Visualise energy and resource use
- Filters, data interrogation and trend tools
- Viewer for public sharing and citizen engagement
- Central repository for ICL project data and models

iPIM

iPIM is a building portfolio and asset management tool for the visualisation of key performance indicators and data.

- Identify data patterns, make connections
- Map resource and cost impacts
- Map views, filters, data interrogation and trend tools
- Provide sustainability insights
- Monitor progress towards sustainability goals
- Identify worst performers

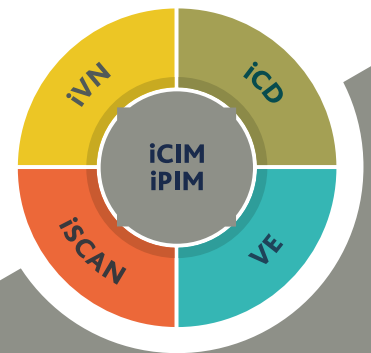

Intelligent Communities Lifecycle

Citizens, Companies, Campuses, Communities, Cities, Countries

The ICL is a cutting-edge suite of digital twin technologies that enable energy efficient and sustainable communities, campuses, portfolios, buildings and local networks.
